Subject : First FDA inspection

We are pleased to announce that Valtronic Technologies received in November a successful FDA inspection at its Swiss site in the Vallée de Joux. The inspection covered activities associated with mechanical and electronic components assembled for a complete device (including final testing and packaging).

The successful inspection result confirms that Valtronic Technologies is able to offer to its customers not only customized electronic or mechanical sub-assemblies, but also complete systems, with the highest quality standards according to QSR 21CFR820 and ISO13485 requirements.

Encouraged by this positive result, Valtronic Technologies remains committed to its objective of being a leading provider of world class quality product development and contract manufacturing services to the global medical market.
